

In our architectural projects we combine technology driven solutions and virtual, 3D technology with a client oriented, cost and energy efficient attitude. We are committed to the modern, simple architectural designs and to the classic, traditional architectural designs as well. Sustainability plays a more and more important role in our projects so we focus on energy efficiency and environment friendliness e.g. in the design of passive houses in recent years. We maximize the benefits of using 3D technology, so our 3D models can be used for quantification, estimation, energy simulation and visualization as well. We have successful cooperation with our co-designers who have similar, solution orientated attitude. We are proud of our long lasting, successful relationships with our clients and we hope that we can build a great cooperation with you too!

□ Váci street record office

- Made an authorization plan of a record office for the Government
- at Hungary, Budapest 13th district
- 2 floor, approx.: 1600 m²
- 2018

□ Hotel Sóstó - First class hotel
